@moonchild711

The other day I was discussing weight loss with a friend, and they asked why I don't really talk about my weight loss, and why I don't share photos of my journey. Well, it was a long time ago, but even back then, I kept it pretty private. My family and closest friends knew, but that was about it. Now, thirteen years later (!) I'll share my story with anyone who cares and wants to hear it. It's nothing overly exciting nor dramatic. I was a TOOTHPICK of a kid until around the mid- to late-nineties. I became morbidly obese pretty quickly (although it didn't seem so at the time). On Jan 19, 2006, I had weight loss surgery ( [#sleevegastroectomy](#) [#vsg](#) ) at [#LapSF](#) .com. Six months later I had lost nearly one hundred pounds. For anyone who thinks WLS is an easy fix or the lazy way to lose, I got news for you. It was the opposite of "easy". WLS in general was fairly new back in 2006 and VSG was even newer. No one had ever heard of it, essentially. The term "addiction transfer" hadn't really been coined yet. Well, I coined it. I've now been [#cleanandsober](#) for eight years and almost three months. But the weight has mostly stayed off in the years that followed, and the only thing I regret is not taking better [#beforeandafterweightloss](#) photos. The one on the left was taken about 7 weeks prior to surgery and the one on the right was six about 4 or 5 months after surgery. So, that's the story. [#WeightLoss](#)
